

The American Security Council

The American Security Council Foundation was founded in 1958 and focuses on policy research relating to United States foreign policy, national security, and the global economy. More specifically, the ASCF emphasizes maintaining American strength through peace by military, economic, and diplomatic endeavors.

The ASCF has also been credited with working towards requiring the United States government to publish a National Security Strategy. With the initiation of this strategy by President Reagan in 1985, the ASCF has succeeded in helping to create an official statement by the United States regarding the strength of American national security.
